MODEL SELECTION AND VALIDATION REPORT ( 2017_2022_biomass model )
--------------------------------------------------------------------

## OBSERVATIONS:954

## SANITY: OK − all models in the selection process passed sanity checks.

## SELECTED RANDOM TERM: spatiotemporal_random_fields_ar1

## MODEL SUMMARY ( 2017_2022_biomass model )

Spatiotemporal model fit by REML ['sdmTMB']
Formula: fixed_formula
Time column: year
Family: lognormal(link = 'log')

Conditional model:
              coef.est coef.se
(Intercept)       7.22    0.15
kde_fric          0.05    0.03
kde_feve         −0.10    0.03
tric             −0.02    0.03
teve             −0.28    0.03
sbt_mean          0.33    0.09
sbt_sd           −0.03    0.05
sst_sd            0.01    0.05
sic_mean         −0.11    0.08
log_chla_mean     0.10    0.05
depth            −0.28    0.05

Dispersion parameter: 0.74
Spatiotemporal AR1 correlation (rho): 0.74
Matérn range: 291.46
Spatiotemporal marginal AR1 SD: 0.56
REML criterion at convergence: 7838.923

See ?tidy.sdmTMB to extract these values as a data frame.

## SELECTION STATISTICS
                                                   df      AIC delta_AIC
