MODEL SELECTION AND VALIDATION REPORT ( arctic_biomass model )
----------------------------------------------------------------------

## OBSERVATIONS:863

## SANITY: OK − all models in the selection process passed sanity checks.

## SELECTED RANDOM TERM: spatiotemporal_random_fields_ar1

## MODEL SUMMARY ( arctic_biomass model )

Spatiotemporal model fit by REML ['sdmTMB']
Formula: fixed_formula
Time column: year
Family: lognormal(link = 'log')

Conditional model:
              coef.est coef.se
(Intercept)       7.02    0.73
kde_fric          0.13    0.04
kde_feve         −0.15    0.04
tric             −0.14    0.04
teve             −0.32    0.04
sbt_mean          0.16    0.04
sic_mean          0.04    0.09
sbt_sd            0.16    0.07
sst_sd            0.08    0.06
log_chla_mean     0.01    0.05
depth             0.09    0.05

Dispersion parameter: 0.88
Spatiotemporal AR1 correlation (rho): 0.96
Matérn range: 726.22
Spatiotemporal marginal AR1 SD: 0.95
REML criterion at convergence: 7062.352

See ?tidy.sdmTMB to extract these values as a data frame.

## SELECTION STATISTICS
